2020 Census Geographic Entity Tallies by State and Type The 2020 Census Geographic Entities by State and Type tallies provide a comprehensive view of the numbers of each type of geographic entity, by state, for

which the Census Bureau tabulates decennial census and other statistical data.

Download a tab delimited text version of the table [<1.0 MB]

Download a Microsoft Excel version of the table [<1.0 MB]

database. Not all geographic entity types exist in each state.

51

How to Read this Table Information in the table is organized by high-level geographic entity type (for example, American Indian and Alaska Native area, County Subdivisions, Places). High-level categories are then subdivided into additional categories, depending on the amount of variety in the kinds of geographic entities within the category. For

example, "Places" is subdivided into "Incorporated Places" and "Census

Designated Places." The Incorporated Place category is further subdivided

between those that have active governments, inactive governments, and those

that do not have governmental functions. Within each of these categories, the

chart lists the number of entities by legal status-for example, city, town, village,

Please note that the categories and subcategories shown on this chart represent

the full range of geographic entity types within the Census Bureau's geographic

The national totals on this chart do not necessarily equal the sum of the state

totals. Some geographic areas cross state boundaries and so a single geographic

area can be counted in more than one state. Therefore, it is expected that the sum of the state totals would be larger than national tallies for these columns.
